## EXPERIENCE

Front-end Developer Intern

AAKANKSHA

Oct 2021 – Jan 2022

*New Delhi, India*

- I was working on React.js project where my job was to make the project more interactive and responsive.
- In this internship I learned how to collaborate with the team and how to work with the organisation.
- **Tools:** HTML5, CSS3, JavaScript, React.js, Bootstrap, Git, GitHub.

## PROJECT

NewsHub – API based news web application | [github//newshub-react](https://github.com/newshub-react)

- Newshub is a web application that is developed using React.js and Bootstrap.
- In this react app I use news API to fetch the latest news. To make the API key secure I use .env file and put the file into .gitignore.
- In this application you can see the top headlines on the home page and you can also see news on the basis of their category to click on the specific link on the navbar.

TxtConverter – Word count & text converter web application | [github//txt-converter](https://github.com/txt-converter) | [live//txt-converter](https://live//txt-converter)

- This is a web application and it was developed with the help of React.js & Bootstrap.
- In React.js I used hooks and props and function-based components to develop this application.
- This web application has some features, where you can convert your text in uppercase & lowercase, copy your text to your clipboard, clear extra spaces from your text and clear the text area with one click.

E-Fashion – Fashion & Beauty store web application | [github//e-fashion](https://github.com/e-fashion) | [live//e-fashion](https://live//e-fashion)

- Full e-commerce fashion website front-end. This is a fully responsive.
- It was developed using HTML5, CSS3 & JavaScript.
