## EDUCATION

**Mahatma Jyotiba Phule Rohilkhand University**                                      Bareilly, UP
Master of Computer Applications (MCA) – CGPA: 9.08                          2021 – 2023

**School of Management Sciences**                                                          Varanasi, UP
Bachelor of Computer Applications (BCA) – Percentage: 63.33          2016 – 2019

## SKILLS

- **Languages:** C, Java, JavaScript, SQL, HTML, CSS
- **Libraries/Framework:** ReactJS, jQuery, Bootstrap, NodeJS, ExpressJS
- **Database:** MySQL, MongoDB
- **Tools:** Git, GitHub, Wordpress, VSCode, IntelliJ
- **Others:** Data Structures & Algorithm, OOPs Concept, DBMS, Operating System, Linux

## EXPERIENCE

**Front End Developer Intern**                                                        Oct 2021 – Jan 2022
AAKANKSHA                                                                                   New Delhi, India

- I worked on a React.js project where my responsibility was to enhance the interactivity and responsiveness of the project.
- During this internship, I learned how to effectively collaborate with a team and navigate within the organizational structure.
- **Tools:** HTML, CSS, JavaScript, React.js, Bootstrap, Git, GitHub.

## PROJECT

**TempTrek – Weather web application** | github//weather-app | live//weather-app
- Developed a dynamic Weather App that utilizes APIs to fetch real-time weather data and display it on the interface with the help of React.js.
- Implemented geolocation functionality to provide users with accurate weather information based on their current location.
- Integrated a 5-day forecast feature that offers users the ability to view upcoming weather conditions at a glance.

**NewsHub – API based news web application** | github//newshub-react
- Developed a news web app with React.js for dynamic functionality and Bootstrap for responsiveness.
- To create this React app, I used news APIs to fetch the latest news. In order to ensure the security of the API key, I employed an .env file and added it to the .gitignore to prevent it from being exposed.
- In this application, you can view top headlines on the home page and explore categorized news by clicking specify navbar links.

**TxtConverter – Word count & text converter web app** | github//txt-converter | live//txt-converter
- Developed with the help of React.js & Bootstrap. In this project I used hooks and props and function-based components to develop this web application.
- This web application has some features, where you can convert your text in uppercase & lowercase, copy your text to your clipboard, clear extra spaces from your text & clear the text area with one click.

## CERTIFICATE

- **React – The Complete Guide 2023 |** Udemy | Certificate
- **Responsive Web Design |** freeCodeCamp | Certificate
